CONTENTS

Preface xiii

Note to the Student xxi

1 What Is Statistics? 1

1.1 Introduction 1

1.2 Characterizing a Set of Measurements: Graphical Methods 3

1.3 Characterizing a Set of Measurements: Numerical Methods 8

1.4 How Inferences Are Made 13

1.5 Theory and Reality 14

1.6 Summary 15

2 Probability 20

2.1 Introduction 20

2.2 Probability and Inference 21

2.3 A Review of Set Notation 23

2.4 A Probabilistic Model for an Experiment: The Discrete Case 26

2.5 Calculating the Probability of an Event: The Sample-Point Method 35

2.6 Tools for Counting Sample Points 40

2.7 Conditional Probability and the Independence of Events 51

2.8 Two Laws of Probability 57

2.9 Calculating the Probability of an Event: The Event-Composition Method 62

2.10 The Law of Total Probability and Bayes' Rule 70

2.11 Numerical Events and Random Variables 75

2.12 Random Sampling 77

2.13 Summary 79

3 Discrete Random Variables and Their Probability Distributions 86

3.1 Basic Definition 86

3.2 The Probability Distribution for a Discrete Random Variable 87

3.3 The Expected Value of a Random Variable or a Function of a Random Variable 91

3.4 The Binomial Probability Distribution 100

3.5 The Geometric Probability Distribution 114

3.6 The Negative Binomial Probability Distribution (Optional) 121

3.7 The Hypergeometric Probability Distribution 125

3.8 The Poisson Probability Distribution 131

3.9 Moments and Moment-Generating Functions 138

3.10 Probability-Generating Functions (Optional) 143

3.11 Tchebysheff's Theorem 146

3.12 Summary 149

4 Continuous Variables and Their Probability Distributions 157

4.1 Introduction 157

4.2 The Probability Distribution for a Continuous Random Variable 158

4.3 Expected Values for Continuous Random Variables 170

4.4 The Uniform Probability Distribution 174

4.5 The Normal Probability Distribution 178

4.6 The Gamma Probability Distribution 185

4.7 The Beta Probability Distribution 194

4.8 Some General Comments 201

4.9 Other Expected Values 202

4.10 Tchebysheff's Theorem 207

4.11 Expectations of Discontinuous Functions and Mixed Probability Distributions (Optional) 210

4.12 Summary 214

5 Multivariate Probability Distributions 223

5.1 Introduction 223

5.2 Bivariate and Multivariate Probability Distributions 224

5.3 Marginal and Conditional Probability Distributions 235

5.4 Independent Random Variables 247

5.5 The Expected Value of a Function of Random Variables 255

5.6 Special Theorems 258

5.7 The Covariance of Two Random Variables 264

5.8 The Expected Value and Variance of Linear Functions of Random Variables 270

5.9 The Multinomial Probability Distribution 279

5.10 The Bivariate Normal Distribution (Optional) 283

5.11 Conditional Expectations 285

5.12 Summary 290

6 Functions of Random Variables 296

6.1 Introduction 296

6.2 Finding the Probability Distribution of a Function of Random Variables 297

6.3 The Method of Distribution Functions 298

6.4 The Method of Transformations 310

6.5 The Method of Moment-Generating Functions 318

6.6 Multivariable Transformations Using Jacobians (Optional) 325

6.7 Order Statistics 333

6.8 Summary 341

7 Sampling Distributions and the Central Limit Theorem 346

7.1 Introduction 346

7.2 Sampling Distributions Related to the Normal Distribution 353

7.3 The Central Limit Theorem 370

7.4 A Proof of the Central Limit Theorem (Optional) 377

7.5 The Normal Approximation to the Binomial Distribution 378

7.6 Summary 385

8 Estimation 390

8.1 Introduction 390

8.2 The Bias and Mean Square Error of Point Estimators 392

8.3 Some Common Unbiased Point Estimators 396

8.4 Evaluating the Goodness of a Point Estimator 399

8.5 Confidence Intervals 406

8.6 Large-Sample Confidence Intervals 411

8.7 Selecting the Sample Size 421

8.8 Small-Sample Confidence Intervals for μ and $\mu_1 - \mu_2$ 425

8.9 Confidence Intervals for σ^2 434

8.10 Summary 437

9 Properties of Point Estimators and Methods of Estimation 444

9.1 Introduction 444

9.2 Relative Efficiency 445

9.3 Consistency 448

9.4 Sufficiency 459

9.5 The Rao–Blackwell Theorem and Minimum-Variance Unbiased Estimation 464

9.6 The Method of Moments 472

9.7 The Method of Maximum Likelihood 476

9.8 Some Large-Sample Properties of Maximum-Likelihood Estimators (Optional) 483

9.9 Summary 485

10 Hypothesis Testing 488

10.1 Introduction 488

10.2 Elements of a Statistical Test 489

10.3 Common Large-Sample Tests 496

10.4 Calculating Type II Error Probabilities and Finding the Sample Size for Z Tests 507

10.5 Relationships Between Hypothesis-Testing Procedures and Confidence Intervals 511

10.6 Another Way to Report the Results of a Statistical Test: Attained Significance Levels, or p-Values 513

10.7 Some Comments on the Theory of Hypothesis Testing 518

10.8 Small-Sample Hypothesis Testing for μ and $\mu_1 - \mu_2$ 520

10.9 Testing Hypotheses Concerning Variances 530

10.10 Power of Tests and the Neyman–Pearson Lemma 540

10.11 Likelihood Ratio Tests 549

10.12 Summary 556

11 Linear Models and Estimation by Least Squares 563

11.1 Introduction 564

11.2 Linear Statistical Models 566

11.3 The Method of Least Squares 569

11.4 Properties of the Least-Squares Estimators: Simple Linear Regression 577

11.5 Inferences Concerning the Parameters β_i 584

11.6 Inferences Concerning Linear Functions of the Model Parameters: Simple Linear Regression 589

11.7 Predicting a Particular Value of Y by Using Simple Linear Regression 593

11.8 Correlation 598

11.9 Some Practical Examples 604

11.10 Fitting the Linear Model by Using Matrices 609

11.11 Linear Functions of the Model Parameters: Multiple Linear Regression 615

11.12 Inferences Concerning Linear Functions of the Model Parameters: Multiple Linear Regression 616

11.13 Predicting a Particular Value of Y by Using Multiple Regression 622

11.14 A Test for $H_0 : \beta_{g+1} = \beta_{g+2} = \cdots = \beta_k = 0$ 624

11.15 Summary and Concluding Remarks 633

12 Considerations in Designing Experiments 640

12.1 The Elements Affecting the Information in a Sample 640

12.2 Designing Experiments to Increase Accuracy 641

12.3 The Matched-Pairs Experiment 644

12.4 Some Elementary Experimental Designs 651

12.5 Summary 657

13 The Analysis of Variance 661

13.1 Introduction 661

13.2 The Analysis of Variance Procedure 662

13.3 Comparison of More Than Two Means: Analysis of Variance for a One-Way Layout 667

13.4 An Analysis of Variance Table for a One-Way Layout 671

13.5 A Statistical Model for the One-Way Layout 677

13.6 Proof of Additivity of the Sums of Squares and E(MST) for a One-Way Layout (Optional) 679

13.7 Estimation in the One-Way Layout 681

13.8 A Statistical Model for the Randomized Block Design 686

13.9 The Analysis of Variance for a Randomized Block Design 688

13.10 Estimation in the Randomized Block Design 695

13.11 Selecting the Sample Size 696

13.12 Simultaneous Confidence Intervals for More Than One Parameter 698

13.13 Analysis of Variance Using Linear Models 701

13.14 Summary 705

14 Analysis of Categorical Data 713

14.1 A Description of the Experiment 713

14.2 The Chi-Square Test 714

14.3 A Test of a Hypothesis Concerning Specified Cell Probabilities: A Goodness-of-Fit Test 716

14.4 Contingency Tables 721

14.5 $r \times c$ Tables with Fixed Row or Column Totals 729

14.6 Other Applications 734

14.7 Summary and Concluding Remarks 736

15 Nonparametric Statistics 741

15.1 Introduction 741

15.2 A General Two-Sample Shift Model 742

15.3 The Sign Test for a Matched-Pairs Experiment 744

15.4 The Wilcoxon Signed-Rank Test for a Matched-Pairs Experiment 750

15.5 Using Ranks for Comparing Two Population Distributions: Independent Random Samples 755

15.6 The Mann–Whitney U Test: Independent Random Samples 758

15.7 The Kruskal–Wallis Test for the One-Way Layout 765

15.8 The Friedman Test for Randomized Block Designs 771

15.9 The Runs Test: A Test for Randomness 777

15.10 Rank Correlation Coefficient 783

15.11 Some General Comments on Nonparametric Statistical Tests 789

16 Introduction to Bayesian Methods for Inference 796

16.1 Introduction 796

16.2 Bayesian Priors, Posteriors, and Estimators 797

16.3 Bayesian Credible Intervals 808

16.4 Bayesian Tests of Hypotheses 813

16.5 Summary and Additional Comments 816

Appendix 1 Matrices and Other Useful Mathematical Results 821

A1.1 Matrices and Matrix Algebra 821

A1.2 Addition of Matrices 822

A1.3 Multiplication of a Matrix by a Real Number 823

A1.4 Matrix Multiplication 823

A1.5 Identity Elements 825

A1.6 The Inverse of a Matrix 827

A1.7 The Transpose of a Matrix 828

A1.8 A Matrix Expression for a System of Simultaneous Linear Equations 828

A1.9 Inverting a Matrix 830

A1.10 Solving a System of Simultaneous Linear Equations 834

A1.11 Other Useful Mathematical Results 835

Appendix 2 Common Probability Distributions, Means, Variances, and Moment-Generating Functions 837

Table 1 Discrete Distributions 837

Table 2 Continuous Distributions 838

Appendix 3 Tables 839

Table 1 Binomial Probabilities 839

Table 2 Table of e^{-x} 842

Table 3 Poisson Probabilities 843

Table 4 Normal Curve Areas 848

Table 5 Percentage Points of the t Distributions 849

Table 6 Percentage Points of the χ^2 Distributions 850

Table 7 Percentage Points of the F Distributions 852

Table 8 Distribution Function of U 862

Table 9 Critical Values of T in the Wilcoxon Matched-Pairs, Signed-Ranks Test; $n = 5(1)50$ 868

Table 10 Distribution of the Total Number of Runs R in Samples of Size (n_1, n_2); $P(R \leq a)$ 870

Table 11 Critical Values of Spearman's Rank Correlation Coefficient 872

Table 12 Random Numbers 873

Answers to Exercises 877
